

Spectra-trait PLSR example using leaf-level spectra and leaf nitrogen content (Narea, g/m²) data from 36 species growing in Rosa rugosa invaded coastal grassland communities in Belgium

Shawn P. Serbin, Julien Lamour, & Jeremiah Anderson

Overview

This is an R Markdown Notebook to illustrate how to retrieve a dataset from the EcoSIS spectral database, choose the “optimal” number of plsr components, and fit a plsr model for leaf nitrogen content (Narea, g/m²)

Getting Started

Installation

```
## Loading required package: usethis
##
## Attaching package: 'remotes'
##
## The following objects are masked from 'package:devtools':
##
##   dev_package_deps, install_bioc, install_bitbucket, install_cran,
##   install_deps, install_dev, install_git, install_github,
##   install_gitlab, install_local, install_svn, install_url,
##   install_version, update_packages
##
## The following object is masked from 'package:usethis':
##
##   git_credentials
##
## Attaching package: 'pls'
##
## The following object is masked from 'package:stats':
##
##   loadings
##
## Attaching package: 'dplyr'
##
## The following objects are masked from 'package:stats':
##
##   filter, lag
##
## The following objects are masked from 'package:base':
##
##   intersect, setdiff, setequal, union
## here() starts at /Users/sserbin/Data/GitHub/PLSR_for_plant_trait_prediction
```

```
##
## Attaching package: 'gridExtra'

## The following object is masked from 'package:dplyr':
##
##      combine
```

Setup other functions and options

```
